The Freedom of Flight

Experience the joy of your first flight—the easy, fast, and safe way.

All you need is the spirit of adventure and the ability to jog 50 feet for takeoff.*

A paraglider is half parachute and half glider. Its simple canopy design consists of a set of closely spaced parallel tubular nylon pockets, called cells. And it is easy too!

We use state of the art tandem gliders specially built for two. Our tandem flights consist of a short briefing prior to flight.

All you need to do is get to the top of a hill, get strapped in to a harness safely connected to your instructor, and run forward a few steps. Then you can sit back and relax—your instructor does all the work. As your instructor controls the steering lines and pulls on the risers, you will feel your feet lift off the ground as you begin to soar like a bird.

Once you are soaring, the pilot can easily talk to you and

explain how to control the paraglider. If the conditions are right and you are willing, the pilot can turn the controls over and let you experience what it is like to fly an unpowered craft.

Bring your camera because this is an experience you will not forget!

Whether you are an avid enthusiast, beginner, or just interested in being piloted as a tandem passenger, you will most assuredly have the experience of a lifetime!

*Tandem passenger weight cannot exceed 240 lbs.

The length of the actual flight depends on flight conditions. The whole process (paperwork, launch preparation, flight, landing, and packing up) may take between 1 to 2 hours and is weather dependent.
